

## APP STORE OPTIMIZATION REPORT

# AI Skin & Face Scanner

Keyword research, ranking strategy, competitor analysis & store-listing recommendations for the Apple App Store & Google Play.

Prepared June 17, 2026 • Market: US • Audience: Gen Z & Millennials

**On the data:** Figures are expert ASO estimates for the US skincare-app niche, not live rank-tracker pulls — the connected astro database tracks other categories (AI headshots, interior design, trading AI) and held no skin/face keyword data. Once a bundle ID exists, the app plus competitors can be loaded into astro to replace these estimates with measured difficulty & popularity scores.

## 1 & 2 — Top Keywords: Volume, Competition & Difficulty

### (a) High-Volume Head Terms

| KEYWORD           | VOLUME    | COMPETITION | DIFFICULTY |
|-------------------|-----------|-------------|------------|
| skin              | Very High | Very High   | Very Hard  |
| skin care         | High      | High        | Very Hard  |
| skincare          | High      | High        | Very Hard  |
| acne              | High      | High        | Hard       |
| face scanner      | High      | Med-High    | Hard       |
| skin analysis     | High      | Med         | Med-Hard   |
| skin care routine | High      | High        | Hard       |
| glow up           | High      | High        | Hard       |
| face analysis     | Med-High  | Med         | Med        |

### (b) Easier-to-Rank Long-Tail Terms ← your real opportunity

| KEYWORD            | VOLUME  | COMPETITION | DIFFICULTY |
|--------------------|---------|-------------|------------|
| ai skin analysis   | Med     | Low-Med     | Easy-Med   |
| skin scanner       | Med     | Low-Med     | Easy-Med   |
| face skin analyzer | Med     | Low         | Easy       |
| skin analyzer ai   | Med     | Low         | Easy       |
| acne tracker       | Med     | Low         | Easy       |
| skin care tracker  | Med     | Low-Med     | Easy-Med   |
| skin diary         | Low-Med | Low         | Easy       |

|                          |         |         |          |
|--------------------------|---------|---------|----------|
| ai skincare routine      | Med     | Low-Med | Easy-Med |
| pimple / acne scanner    | Low-Med | Low     | Easy     |
| skin type test           | Med     | Low-Med | Easy-Med |
| dark spot / pigmentation | Low-Med | Low     | Easy     |
| pore analysis            | Low     | Low     | Easy     |
| wrinkle / aging analysis | Med     | Med     | Med      |
| face glow analysis       | Low-Med | Low     | Easy     |
| ingredient scanner       | Med     | Med     | Med      |
| skin progress tracker    | Low-Med | Low     | Easy     |
| personalized skincare    | Med     | Med     | Med      |

(c) Competitor / Brand Terms

| KEYWORD     | VOLUME  | COMPETITION | DIFFICULTY   |
|-------------|---------|-------------|--------------|
| troveskin   | Low-Med | Low         | Easy (brand) |
| mdacne      | Med     | Low         | Easy (brand) |
| lovi / lóvi | Med     | Low         | Easy (brand) |
| youcam      | High    | Low         | Easy (brand) |
| curology    | High    | Low         | Easy (brand) |
| yuka        | High    | Low         | Easy (brand) |
| cetaphil    | Med     | Low         | Easy (brand) |

**Legal note:** Brand terms are cheap to rank for, but you cannot place a competitor's trademark in your Title or Subtitle. Use sparingly in the Play long description only — Apple frequently rejects metadata containing rival brand names.

### 3 & 4 — Best Keywords for a Brand-New App to Actually Rank For

Sweet spot = decent volume + low competition + tight relevance to your core scan-and-track function.

| PRIORITY | KEYWORD                      | WHY IT WINS                                                    |
|----------|------------------------------|----------------------------------------------------------------|
| ★ 1      | ai skin analysis             | Exactly your product; rising volume, still beatable            |
| ★ 2      | skin analyzer / skin scanner | High intent, mid competition, your literal function            |
| ★ 3      | acne tracker                 | Strong Gen-Z intent, low competition, daily-use angle          |
| ★ 4      | skin care tracker            | Captures the progress-tracking feature; easier than "skincare" |
| ★ 5      | skin type test               | High curiosity / quiz intent, easy to rank                     |
| 6        | ai skincare routine          | Pairs your AI engine with the routine output                   |
| 7        | face skin analyzer           | Long-tail of head term, low competition                        |
| 8        | skin diary                   | Cheap to own, loyal-user intent                                |
| 9        | dark spots / pimple scanner  | Specific-issue searchers convert well                          |
| 10       | glow up (secondary)          | Big volume; chase only after easier terms rank                 |

**Strategy:** Anchor your Title & Subtitle on terms 1–4. Seed 5–10 into the Apple keyword field and the Play long description. Don't burn early effort on "skincare / skin care / glow up" head terms — you won't rank there until you've built ratings volume.

### 5 — Optimized Store Metadata

| FIELD                        | RECOMMENDATION                                                                                    | CHARS |
|------------------------------|---------------------------------------------------------------------------------------------------|-------|
| App Store Title (≤30)        | Skin Scan: AI Face Analysis                                                                       | 27    |
| App Store Subtitle (≤30)     | Acne, Glow & Skincare Routine                                                                     | 29    |
| Apple Keyword Field (100)    | analyzer,scanner,tracker,acne,pimple,wrinkle,pore,darkspot,routine,glow,derma,skintype,diary,test | ~96   |
| Play Short Description (≤80) | AI skin analysis: scan your face for acne, dark spots & a glow-up routine                         | 73    |

Don't repeat words already in your Title/Subtitle inside the Apple keyword field — it wastes space. For Play, repeat primary keywords 3–5× naturally across the long description.

#### Alternate title pairings

- Skincare AI: Face Skin Scan (27)
- Glow: AI Skin Analyzer (22) + subtitle Acne, Pore & Skincare Tracker (29)

## 6 — Top Competing Apps & Their Keyword Focus

| APP                              | ANGLE                                       | RANKS / TARGETS FOR                                 |
|----------------------------------|---------------------------------------------|-----------------------------------------------------|
| TroveSkin                        | Skin diary + AI skin scan                   | skin diary, skin tracker, skin analysis, acne       |
| Lóvi (Lovi)                      | AI skin & body scanner, viral on TikTok     | skin scanner, ai skincare, face analysis, glow      |
| MDacne                           | Acne-specific, dermatologist-built          | acne, acne treatment, pimple, clear skin            |
| YouCam (Perfect Corp)            | AI skin diagnostics + AR makeup             | skin analysis, skincare, beauty, makeup             |
| Cherry / Dewy                    | Skincare routine + progress tracking        | skincare routine, skin care tracker, diary          |
| Curology                         | Rx skincare brand app                       | curology, custom skincare, acne, anti-aging         |
| Yuka / Think Dirty / INCI Beauty | Ingredient / product scanners               | ingredient scanner, cosmetic scanner, product check |
| Perfect365 / Aimei AI            | AI beauty + skin scoring                    | face analysis, beauty score, glow up                |
| Aysa / Skinive                   | AI skin-condition checker (medical-leaning) | skin checker, skin condition, mole/skin scan        |

**Your differentiation gap to exploit:** daily progress tracking + before/after trend graphs + AM/PM routine + ingredient suitability in *one* app. Most competitors do one or two of these, not all four. Lead with that in your screenshots and description copy.

## 7 — Five App-Name Ideas (Keyword-Rich)

Live trademark / App Store availability can't be verified from here — check each in App Store Connect plus a USPTO/TESS search before committing. All embed a high-value keyword.

| NAME        | KEYWORD BAKED IN      | NOTES                                          |
|-------------|-----------------------|------------------------------------------------|
| GlowScan AI | glow + scan           | Brandable, Gen-Z friendly, great for "glow up" |
| SkinSense   | skin                  | Clean, implies analysis / intelligence         |
| DermaLens   | derma                 | Premium / clinical feel; "lens" = scanning     |
| ClearScan   | scan (+ "clear skin") | Ties to acne / clear-skin intent               |
| Skinly      | skin                  | Short, app-y, easy to spell and say            |

**Backups if any are taken:** Glowtrack, SkinIQ, DermaScan, FaceGlow AI, Skinaly.
